During the course of the interview, the interviewer may notice a specific even that (s)he may consider important, such as an outburst or a confession. By inserting a **Bookmark**, that important event can be named, and it will be time-stamped. It is up to the interviewer whether or not to “name” the Bookmark at the time it is created.

By calling up that bookmark in **SEARCH/PLAYBACK MODE**, the interviewer can return to that critical moment at any time in the future. Bookmarks can even be created in **SEARCH/PLAYBACK MODE**, if an observer with proper credentialing thinks it is relevant to do so.

Named bookmarks can also be searched for in **SEARCH/PLAYBACK MODE**.

Notice that the control panel takes on a different appearance in the **LIVE VIEW** and in the **SEARCH/PLAYBACK MODE**, as seen in Figure 11: Setting a Video Bookmark in LIVE VIEW Mode and in Figure 12: Setting a Video Bookmark in PLAYBACK Mode. But in both cases “**CREATE VIDEO BOOKMARK**” is on the extreme lower right hand corner.

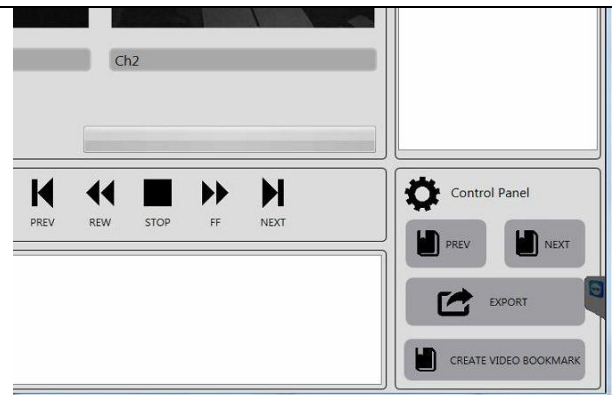

Figure 12: Setting a Video Bookmark in PLAYBACK Mode

with a lecture or an interrogation or (s)he may have simply forgotten. No matter. If desired, it can be chosen by clicking on it, and named by anyone with the proper credentials. Note also that the time that each bookmark was created is noted to its left.

Notice that on clicking the bookmark “See Art Close Up”, the video advanced to the exact point on the video specified by the professor when (s)he created the bookmark, and you will see a close up view of the art the professor is describing, as illustrated in Figure 19: Controlling the Playback of the Video Figure 19.

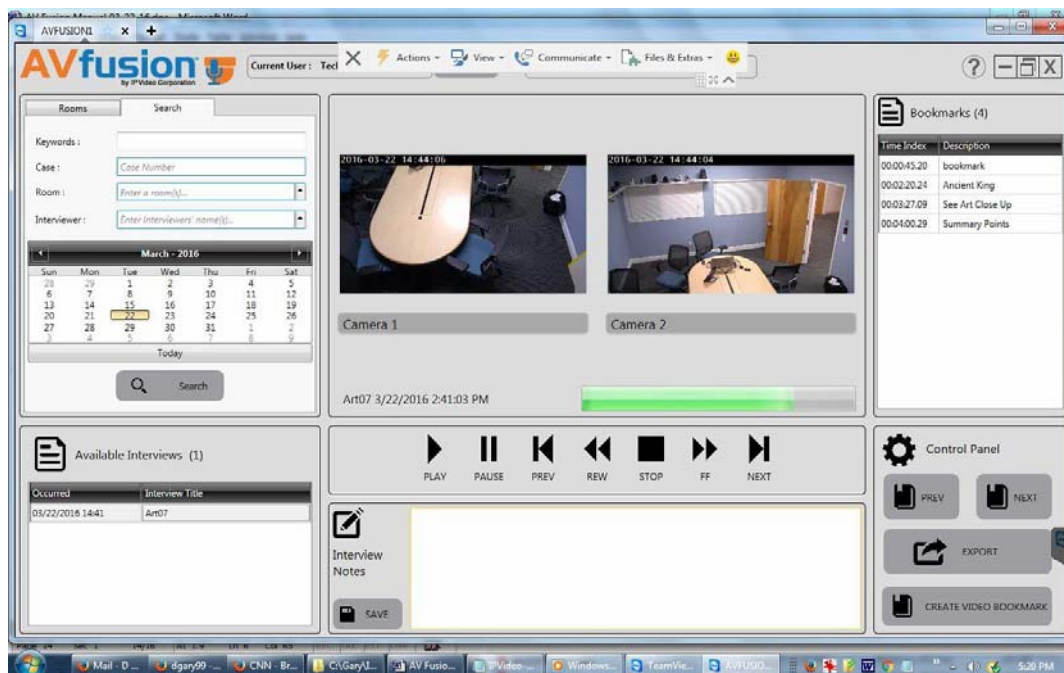

Figure 19: Controlling the Playback of the Video

Note also that the position of the green bar graph has advanced to the point representing three minutes and twenty-seven seconds into the video, the point at which the bookmark was created.

When you are done viewing, simply click “STOP”.

Special Features

System Capacity

AVfusion can supply the user with a massive server that supports over two thousand cameras over hundreds of interview rooms. As is typical of modern, server-based systems, AVfusion is also completely scalable, and much smaller installations are both practical and available.

Export

Another powerful feature of AVfusion is the ability to export any video file. By pressing EXPORT in the CONTROL PANEL, the available choices, such as which camera's view to include, are made available to the operator, as illustrated in **Figure 20: Exporting the Video** Figure 20.

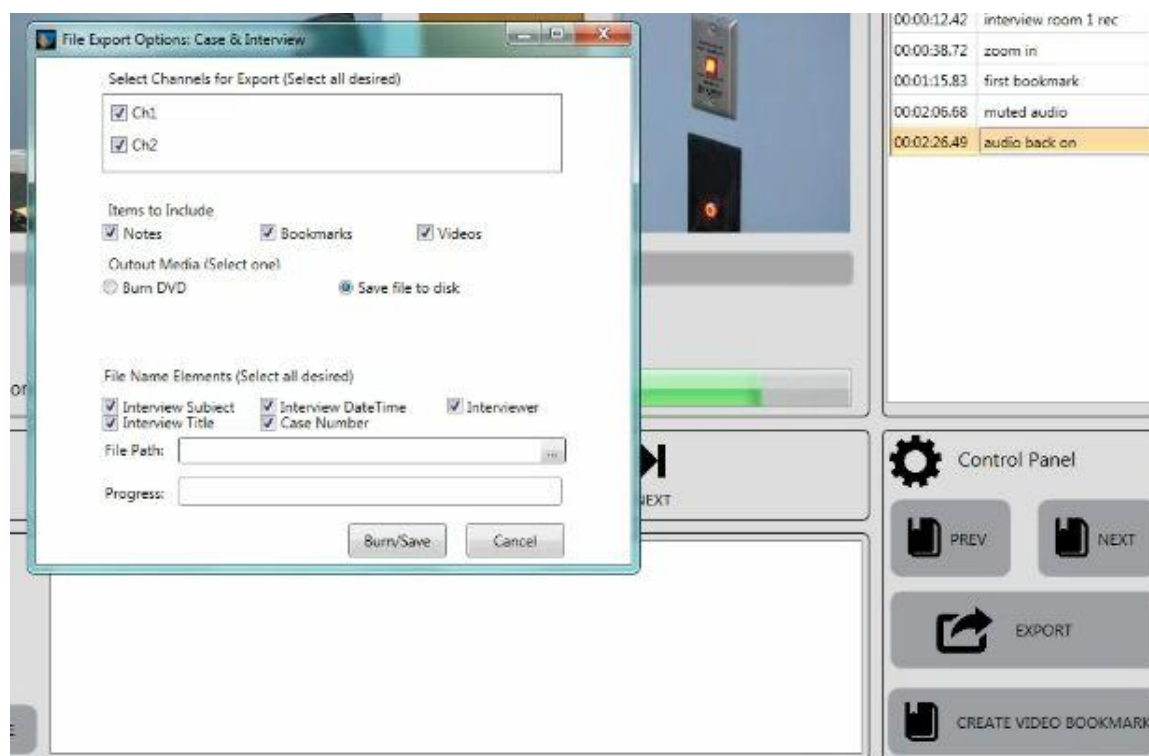

Figure 20: Exporting the Video

As the figure above suggests, that file can be burned to a DVD as an MP4 file, or the session can be stored in a separate location on the server itself.

Digital Watermark

Another feature that makes AVfusion such a powerful tool is the DIGITAL WATERMARK. With this assurance, viewers can be certain that the video file that they see has in no way been tampered with in even the slightest manner. The presence of the intact watermark means

that there can be no doubt that what they see will be what has actually transpired in real-time.

CONTACT US

Call Technical Support: On phone-enabled devices, this setting will call the AVfusion main office number. Once connected, please request to be connected with technical support.

Email Technical Support: For devices with an email client enabled, this setting will allow a user to send an email to AVfusion Technical Support personnel.

IMPORTANT LINKS

Online Documentation: This links to the AVfusion web page for User Support with links to the available User Guides and Manuals.

Tutorial: This setting starts the in-app Tutorial providing an overview of app functionality
